

H1N1 – Doctor Testimonial :30 TV PSA

(Background music playing)

Doctor: I got the H1N1 vaccine because I'm a front-line healthcare provider in the emergency room, so it's very important to protect everyone that I'm around.

The flu itself can cause many different things, it can cause respiratory failure which can not only cause you to be in the hospital, but can cause you to die.

The only way to prevent the H1N1 flu is to be vaccinated, and I recommend it to all my patients who are at risk.

Announcer VO: Stay healthy. Get vaccinated. A message from the KDHE. Call or visit our web site for vaccine locations.
