INTRODUCTION

This is an accompanying document for the Kansas Surface Water Register, which contains the maps of major classified surface waters in the State of Kansas.

The maps of Kansas streams and lakes were prepared using a Geographic Information System, utilizing the National Hydrology Dataset (NHD). A subset of the NHD was selected to represent the Kansas Surface Water Register. In addition, errors in the NHD required some modification, which included stream renaming and the addition of new stream segments.

The Kansas Surface Water Register Maps is composed of one set of maps, which include the streams, lakes and wildlife areas.

Each page depicts one or more Hydrologic Unit Codes (HUC), depending on the HUC size. The map section starts with a reference map and a text version of the HUCS. The maps and the table are hyperlinked in the electronic copy. The segment numbers for the streams are indicated and separated by tic-marks. Lake and wildlife areas are indicated by name and polygon. The maps are grouped alphabetically by basin and then numerically by HUC.
