Q. When I run a roster of clients as a report function in WebMCH, does the roster always balance with form 7?

A. No the roster will report all interventions including the clients that are over age 60 and the clients that are not pregnant. Form 7 will not report these types of intervention because Form 7 only reports MCH population served by your agency. The roster report function includes everyone entered into your system.

Q. How do I get un-duplicated user numbers.

A. Call me at 785-296-1305 and I will run the report for your clinic.

Q. If I enter a case and intervention in 2008 and realize a mistake and remove it with an error correction in 2009, why does it show up as an intervention in 2009?

A. If a client had an intervention in 2008 and in 2009 you realize the mistake and perform the error-out function to this client with no other visits in 2009, the system will recognize the “error-out activity” as an “activity” and the person will be entered on the 2009 roster report.

Q. Does KIPHS report users when you run a report at your clinic?

A. No, it does not un-duplicate visits in order to get the user number.
