

Interim Guidance for Public Health Professionals Managing People With COVID-19 in Home Care and Isolation Who Have Pets or Other Animals

March 5, 2020

Purpose

This interim guidance is for public health professionals managing the [home care and isolation of people with COVID-19](#) who have pets or other animals (including service or working animals) in the same home. The intent of this guidance is to facilitate preparedness and establish practices that can help people and animals stay safe and healthy. Guidance is based on the limited available data and general recommendations for zoonotic disease infection prevention and control. This is a rapidly evolving situation. Guidance will be updated as new information becomes available. **At this time, there is no evidence that companion animals, including pets, can spread COVID-19.** This is a rapidly evolving situation. Guidance will be updated as new information becomes available.

Considerations for COVID-19 patients under home care and isolation who have pets or other animals:

People with COVID-19 should be advised to tell their public health point-of-contact that they have pets or other animals in their home.

[In addition to other prevention measures](#), people with COVID-19, who are identified by public health officials as requiring home care and isolation, should be advised to limit interaction with pets and other animals. Specifically, while these people are [symptomatic](#), they should; 1) maintain separation from pets [as they would with other household members](#), and 2) avoid direct contact with pets, including petting, snuggling, being kissed or licked, and sharing food. Service animals should be permitted to remain with their handlers.

If possible, a household member should be designated to care for pets in the home. If the individual in home care and isolation must care for pet(s), including service animals, they should ensure they wash their hands before and after caring for pets and wear a facemask while interacting with pets, until they are medically cleared to return to normal activities.

When a public health professional is notified of a pet, or other animal, in the home of a person with COVID-19, they should notify the Kansas [State Public Health Veterinarian](#) at 877-427-7317.

The Kansas State Public Health Veterinarian may consult with the CDC One Health Team.

This is a rapidly evolving situation and information will be updated as it becomes available.
