September 4, 2003

Confirmed Cryptosporidiosis Cases as of September 3, 2003

The total number of laboratory-confirmed cases of cryptosporidiosis as of September 3 is 39. The age range of infected persons is one through 70 years. Of the 39 laboratory-confirmed cases, twenty-one, or 54 percent, are children age 18 and younger. Eighteen, or 46 percent, are adults.

The Health Department anticipated an increase in the numbers of laboratory-confirmed cases as a result of active solicitation of specimens.
