IMM8 05/2011

Vaccine Descriptions:

HepB: protects against hepatitis B

DTaP: a combined vaccine that protects against diphtheria, tetanus, and pertussis (whooping cough)

Hib: protects against *Haemophilus influenzae* Type b

PCV: protects against pneumococcal disease

Polio: protects against polio, the vaccine is also known as IPV

RV: protects against infections caused by the Rotavirus

Influenza: protects against influenza (flu)

MMR: protects against measles, mumps, and rubella (German measles)

Varicella: protects against varicella, also known as chickenpox

HepA: protects against hepatitis A

NOTE: If your children miss a shot, you don't need to start over, just go back to your doctor for the next shot. The doctor will help you keep your children up-to-date on his or her vaccinations.

- * This is the age range in which this vaccine should be given.
- ** Influenza is a seasonal vaccine. All children ages 6 months through 18 years should receive vaccination during the influenza season each year. If this is the first time for flu vaccine, a child should receive two doses, separated by at least 4 weeks. If a child only receives one dose in the first season, he or she should receive two doses the next season.

The Recommended Immunization Schedules for Persons Aged 0 Through 18 Years is approved by:

the Advisory Committee on Immunization Practices (www.cdc.gov/vaccines/recs/acip/),
the American Academy of Pediatrics (www.aap.org/), and
the American Academy of Family Physicians (www.aafp.org/).
