Health professionals closest to the event will perform specimen collection of persons within the potential exposure area of a chemical event, either criminal or accidental. In preparation for such an emergency, KDHE and KHEL have positioned supplies at various hospitals around the state. The following is a list of the hospitals that now store enough specimen collections supplies and packaging and shipping materials to collect blood and urine one hundred people who were or may have been exposed. In addition KHEL is storing additional supplies and recruiting more sites. Please make note of these locations and add this resource to your plans. If these resources are needed in an exercise or if you have additional questions please contact Shannon Gabel, Laboratory Preparedness Manager, at sgabel@kdhe.state.ks.us or 785.296.7006.

The locations of the chemical caches are listed below. The chemical metabolites KHEL can detect in human samples are listed in a table following the site list.

List of analytical tests that may be ordered on blood or urine as indicated in the table below.

These chemicals, metals, or their metabolites may be detected, by the KHEL Laboratory Preparedness and Response Program, in the blood or urine of exposed humans in a chemical accident or criminal event.

See the KDHE web site for specific collection and packing instructions.

Matrix	Test Group	Test
