

Question	Answer
<p><i>These questions are a preview for those of you who have yet to implement electronic signature pads.</i></p> <ol style="list-style-type: none"> 1. Will KWIC remind me to get the electronic signature for checks? 2. Now in our clinic the RD prints the checks and the clerk gets them off the printer and hands them to the client and has the client sign the checks. How will electronic signature process work for us? 	<ol style="list-style-type: none"> 1. No. You have to remember to have the client/caregiver sign for checks electronically. In that way, .NET is no different from before. Instead of handing the caregiver a pen and check stubs, you must click "Sign for Checks" from either the Check Issuance drop-down menu or from the bottom of Quick Links. Then the caregiver can sign for all the client checks on the electronic signature pad. 2. The only change is the clerk will open the client record and click on Sign for Checks as described above. (Tip – This will be easier with .NET. The clerk can click on client name in today's Appointment Book instead of using Find Client). <div style="display: flex; justify-content: space-around; margin-top: 20px;"> <div data-bbox="688 932 1003 1812" style="background-color: #f0f0f0; padding: 5px;"> <p>Quick Links for Betty J Plum</p> <ul style="list-style-type: none"> Client Homepage Notes Dual Participation Anthro Meas Blood Meas Health Interview Risk Factors Nutrition Education Referrals Change Due Date Record End of PG Survey History-Health Interview History-Nutrition Education History-Issuance Flowsheet Demographics Notices Reminders Rights & Responsibilities Sign for Checks </div> <div data-bbox="1032 932 1398 1293" style="border: 1px solid #ccc; padding: 5px;"> <p>Check Issuance Clinic Admin</p> <ul style="list-style-type: none"> Assign Food Package Check Pickup Sign for Checks Void and Replace Checks Unvoid Reissue Formula Checks Mailed Checks Letter View History... </div> </div>
