TURN YOUR GARBAGE INTO GOLD! IT’S EASY, IT’S SMART, IT’S RECYCLING.

BASIC COMPOSTING

WHY COMPOST?
Composting is nature’s way of recycling. It is a satisfying way to turn your fruit, vegetable and yard trimmings into a dark, crumbly, sweet-smelling soil conditioner.

COMPOSTING:
• Saves you money by lowering garbage bills and replacing store-bought soil conditioners.
• Helps garden and house plants by improving the fertility and health of your soil.
• Saves water by helping the soil hold moisture and reducing water runoff.
• Benefits the environment by recycling valuable organic resources and extending the life of our landfill.

THE 4 "R'S" OF THE YARD

REDUCE the amount of yard trimmings you make by planting slow-growing, drought-tolerant plants.

REUSE yard trimmings by grasscycling (mowing more often, and leaving the clippings on the lawn) and by mulching fallen leaves and chipped prunings (spread them 6” deep on paths and around trees and shrubs).

RECYCLE remaining yard trimmings by composting. This brochure shows you how.

RESTORE the environment with thriving gardens. It all starts at home!

COMPOST WORKS FOR YOU
Not only does composting help the environment, but it can help your garden, yard, and house plants too! When compost looks like soil and smells sweet and earthy, it is ready to use. Here are some of the most common ways to use compost:

IN THE GARDEN
Before planting, mix a 4” to 8” layer of compost into newly reclaimed or poor soils. Mix a 1/2” to 3” layer of compost into annual garden beds at least once a year. Compost will add nutrients and beneficial microbes, hold water, and improve plant growth.

AROUND THE YARD
Spread a 1” to 6” layer of coarse compost on soil as a mulch, or spread a 1/2” layer of sifted, weed-seed-free compost on turfgrass as a top dressing. These can be done any time of year to improve soil fertility and reduce watering needs.

ON HOUSE PLANTS
Sprinkle a thin layer of compost over house-plant soil to provide nutrients. You can also make a great potting soil by mixing one part compost with two parts sand and/or soil.

DON’T HAVE A GARDEN?
You can still make compost and use it on a house plant, give it to a friend, sprinkle it around a street tree, or use it in a community garden.
**CHOOSE A SYSTEM**

**SYSTEMS FOR FOOD AND YARD TRIMMINGS**
- **Rodent-Resistant Bins**
  - For fruit, vegetable and yard trimmings (using "Mixed" compost recipe)
  - For yard trimmings alone (using "No-Fuss" recipe)
  - Bins require a lid, floor and no holes bigger than 1/4".

**OPEN PILES & SIMPLE BINS**
- For yard trimmings ONLY
- Requires "Active" composting (chopping and weekly turning to keep animals out)
- Usually inexpensive or free.

**SYSTEMS FOR JUST FOOD TRIMMINGS**
For more information about the following, see the Composting Fruit & Vegetable Trimmings brochure.

**Worm Bins**
- Most fun! Takes some time and effort
- For indoors or outdoors
- Produces excellent fertilizer

**Closed-Air Systems**
- Low maintenance
- Prone to odor and insect problems

**Underground Composting**
- Requires digging a hole each time you add new materials
- No harvesting necessary

**REMEMBER...** Whenever you compost fruit and vegetable trimmings, the Health Department requires a rodent-resistant system. Use a container with a lid, a floor, and no holes bigger than 1/4 inch, or bury food scraps at least one foot under the soil surface. For more information about bins, see the Compost Bins – Sources and Designs brochure.

**FOLLOW THE BASICS**

Thanks to friendly bugs and worms, composting is as easy as "1-2-3"—no matter which recipe you use!

1. **CHOP** materials if you want them to break down more quickly.
2. **MIX** "browns" (dry, woody materials) with "greens" (moist, green materials).
3. **MAINTAIN** air and water balance by keeping compost as moist as a wrung-out sponge.

**RECIPEs FOR ROdENT-RESISTANT BIIns**

**NO-FUSS COmPOST**

For yard trimmings ONLY. Requires a rodent-resistant bin to prevent animal nesting.

**INGREDIENTs:**
Yard trimmings only (browns and greens), water as needed.

**DIRECTIONS:**
Feed chopped or unchopped yard trimmings into bin as you generate them. Maintain compost by keeping it moist as a wrung-out sponge.

Harvest rich, brown, finished compost from the bottom and center of the pile after 12 to 18 months.

**MIXED COmPOST**

For fruit, vegetable & yard trimmings together. This recipe requires a rodent-resistant bin and active maintenance to prevent animal nesting and feeding.

**INGREDIENTs:**
Fruit, vegetable and yard trimmings (browns & greens), water as needed.

**DIRECTIONS:**
Feed yard trimmings to your pile as you generate them by chopping them first into pieces 6" or smaller. Feed as often as you like.

Maintain compost by turning or mixing it about once a week. Keep it moist as a wrung-out sponge.

Harvest rich, brown, finished compost by sifting out coarse, unfinished materials after 3 to 8 months.
