Re: RCRA Permit Class 1 Modification – Name Change
Koch Nitrogen Company, LLC (formerly Koch Nitrogen Company) - Dodge City Plant
EPA ID No. KSD044625010

Ladies/Gentlemen:

Please be advised that effective December 31, 2008, Koch Nitrogen Company, a Nebraska corporation ("KNC"), merged with and into its affiliate, Koch Nitrogen Company, LLC, a Delaware limited liability company ("KNCLLC"). KNCLLC is the surviving entity and successor to KNC and by operation of law has become the owner and obligor with respect to the assets and liabilities of KNC. As with KNC, 100% of KNCLLC is owned directly by Koch Mineral Services, LLC. This change did not result in any change to facility employees or company officers.

We are sending you this letter to provide notice of a Class 1 modification to the RCRA Post Closure and Corrective Action Permit, issued by the US Environmental Protection Agency, Region 7, and the Kansas Department of Health and Environment, which governs the management of groundwater affected by historical operations at the Dodge City Nitrogen Plant and the investigation of certain historical waste management processes at the Plant prior to its acquisition by KNC in 2003. This modification authorizes the change in name and structure described above. You are a recipient of this notice because you are on the facility mailing list for the Permit as maintained by KDHE.

If you have any questions about this information, please contact AnnieLaurie Burke, the Plant's Environmental Leader, at (620) 227-8631, ext. 350.

Sincerely,
KOCH NITROGEN COMPANY

Gary J. LeRock
Plant Manager
