WHY IS BREASTFEEDING SO IMPORTANT?

Many health professionals know the benefits of breastfeeding for mom and baby. The American Academy of Pediatrics and many other maternal and child health leading organizations stress how important breastfeeding is as a protective factor. Evidence shows that breastfeeding protects against a variety of diseases and conditions in infancy and childhood such as:

- Diarrhea
- Respiratory tract infection
- Necrotizing enterocolitis
- Otitis media
- Bacteremia
- Late-onset sepsis in preterm infants
- Type 1 and type 2 diabetes
- Lymphoma, leukemia and Hodgkin’s disease
- Childhood overweight and obesity

Breastfeeding also protects maternal health:

- Decreased risk of postpartum bleeding and more rapid uterine involution
- Decreased risk of menstrual blood loss and increased child spacing (lactational amenorrhea)
- Earlier return to prepregnancy weight
- Decreased risk of breast and ovarian cancers
- Decreased risk of hypertension
- Decreased risk of type 2 diabetes

WHY IS GREATER SUPPORT NEEDED?

While nearly nine in ten Kansas mothers who had a baby in 2017-2019 (89.8%) reported "ever" breastfeeding their infants, only 72% reported breastfeeding for at least eight weeks. Looking at the breastfeeding rates at eight weeks postpartum can help identify which mothers are at risk for early weaning, as well as factors that may play a role in supporting the mothers who choose to continue to breastfeed.

Unmet basic needs*

Women who reported having any unmet basic needs (such as food, housing or transportation insecurity) during pregnancy had a significantly lower prevalence of breastfeeding for at least 8 weeks, compared to those who had their basic needs met during pregnancy.

<table>
<thead>
<tr>
<th>Unmet Needs</th>
<th>Breastfeed at least 8 Weeks</th>
</tr>
</thead>
<tbody>
<tr>
<td>61.1%</td>
<td>75.3%</td>
</tr>
</tbody>
</table>

* Any unmet needs during pregnancy = respondent indicated not having affordable transportation, skipping meals or inability to afford food, no access to a phone, inconsistent housing, unsafe housing, crowded living space, could not keep basic utility services on, or another unmet need. No unmet needs = respondent indicated that all needs asked about in the question were met, and did not write in another unmet need. Write-in responses that fit existing answer items were recoded to those answer items.
Breastfeeding Support†

Social Support
Data shows that social support helps mom's continue to breastfeed. Women who reported they had a strong support system (such as a husband/partner, parents or in-laws, or a family member or relative to offer support) had a significantly higher prevalence of breastfeeding for at least 8 weeks, compared to mothers who did not have support after birth.

Policy Support
Unequal access to supportive breastfeeding policies and environments have created persistent racial and ethnic disparities in initiation and duration of breastfeeding. Now, more than ever, providers, policy makers, communities, consumers and families must come together to identify and implement policy and systems changes to ensure that every family that chooses to breastfeed has the support and resources they need to succeed.

What can I do as a Provider?
Providers can play a key role in promoting breastfeeding and supporting families by:

- Communicating the importance of breastfeeding as well as the risks of formula feeding to all of your patients.†
- Educating yourself about breastfeeding and how to care for breastfeeding families in your practice.† (see resources for breastfeeding education opportunities in Kansas.)
- Knowing how to assess breastfeeding and manage common breastfeeding problems.†
- Knowing and utilizing the local resources available to you and your patients (WIC, breastfeeding support groups, lactation consultants, breast pump rental stations, etc.).†
- Understanding how to use breastfeeding equipment and learning how to support women who wish to return to work or school while breastfeeding.†
- Displaying positive images of breastfeeding in your office and encouraging the elimination of practices that interfere with breastfeeding (free formula, industry gifts, or coupons to parents, separation of mother and infant, inappropriate feeding images, etc.).†
- Supporting breastfeeding research.†
- Advocating for positive media coverage about breastfeeding.
- Supporting businesses in your community to be breastfeeding friendly.† Look for the "Breastfeeding Welcome Here" window decal.
- Supporting breastfeeding friendly policies.
- Joining your local breastfeeding coalition.
- Educating yourself on breastfeeding disparities in your community.

† From a question about social support after the birth, where respondents could check all answer items that applied (husband or partner; mother, father, or in-laws; other family member or relative; a friend; religious community; someone else; no one). Excludes those who did not answer the question at all (e.g., left all answers unchecked and did not write in another response). Write-in responses that fit existing answer items were recoded to those answer items.
SOCIAL MEDIA POSTS

1. Did You Know?

Even though the majority of Kansas mothers initiate breastfeeding immediately following the birth of their baby, only half are still doing so at 6 months of age, and only one-third are still breastfeeding on their baby’s first birthday. Research shows that support is key to helping women continue breastfeeding! Becoming a Mom® classes, WIC breastfeeding peer counselor appointments, and La Leche League meetings are a great way for parents to establish support and get valuable information both before and after the birth of their baby.

For more information about WIC breastfeeding peer counselors: [http://www.kansaswic.org/breastfeeding/breastfeeding_peer_counselor_program.html](http://www.kansaswic.org/breastfeeding/breastfeeding_peer_counselor_program.html)

For more information about Becoming a Mom®: [https://www.kdheks.gov/c-f/perinatal_participating_communities.htm](https://www.kdheks.gov/c-f/perinatal_participating_communities.htm)

For more information about La Leche League: [https://www.kansaslll.org/](https://www.kansaslll.org/)

2. Everyone can support breastfeeding in Kansas!

Having support from friends, family, childcare providers, local businesses, and employers can make all the difference to a breastfeeding family. Whether dropping off a meal, supporting her choice to feed her baby in a public space, or providing adequate breaks and space to pump during work time, a little bit of support goes a long way towards helping families meet their breastfeeding goals. For more ideas on how to be a great breastfeeding support, check out the CDC’s “Guide to Strategies to Support Breastfeeding Mothers and Babies” here: [https://www.cdc.gov/breastfeeding/pdf/bf-guide-508.pdf](https://www.cdc.gov/breastfeeding/pdf/bf-guide-508.pdf)

3. It takes a village!

Mothers who receive support during their pregnancy and after giving birth are more likely to breastfeed, and to continue breastfeeding for longer periods of time. There are many resources available to families, including in-person support groups and virtual tools to troubleshoot problems. For a list of resources in your community, as well as links to verified online support, visit the Kansas Breastfeeding Coalition’s webpage located at [ksbreastfeeding.org/resources/](http://ksbreastfeeding.org/resources/) or contact your local health department.

4. Breastfeeding your baby reduces medical costs

Breastfeeding has many benefits for the health of both mom and baby!

- Breastfeeding is a protective factor and reduces the risk of SIDS
- Babies who are breastfed are less likely to develop infections and illnesses including diarrhea, ear infections, and pneumonia
- Children who are breastfed for at least six months are less likely to become obese later in life
- Mothers who breastfeed have a decreased risk of developing breast and ovarian cancers

5. Why do mothers stop breastfeeding?

According to the CDC, 60% of mothers stop breastfeeding earlier than they planned. There are many factors that go into a mother’s decision to stop breastfeeding her baby, including:

- Worried about baby getting enough milk
- Lack of support from family or friends
- Unsupportive workplace or child care
- Embarrassment feeding in public
- Lack of healthcare providers with specific breastfeeding knowledge

Community support matters! For information about resources available in your community, contact your local health department or visit [ksbreastfeeding.org/resources/](http://ksbreastfeeding.org/resources/)

Adapted from information found at [https://www.cdc.gov/breastfeeding/data/facts.html](https://www.cdc.gov/breastfeeding/data/facts.html)

6. Representation matters!

Unequal access to supportive breastfeeding policies and environments have created persistent racial and ethnic disparities in initiation and duration of breastfeeding. Identifying and supporting historically oppressed communities is key to ensuring equal access to resources and helping every family that chooses breastfeeding to reach their goals.
