APPENDIX D

Instructions on How to Obtain Source Classification Codes and Emission Factors

AP-42 is the EPA’s compilation of air pollutant emission factors for both criteria and toxic emissions. AP-42 Volume 1 addresses hundreds of stationary point and area sources. The latest edition (Fifth edition), as well as all subsequent supplements and updates, can be accessed via EPA’s CHIEF website at www.epa.gov/air-emissions-factors-and-quantification/ap-42-compilation-air-emission-factors.

FIRE (Factor Information Retrieval System)

FIRE is now available as an internet application. The WebFIRE application web site provides fast and complete access to EPA’s air emissions factors information. WebFIRE replaces the software application, FIRE version 6.25 and the MS Access version of the database. The WebFIRE can be accessed via EPA’s CHIEF website at cfpub.epa.gov/oarweb/index.cfm?action=fire.main.

Source Classification Codes (SCCs)

An Excel spreadsheet containing Source Classification Codes (SCCs) including their last available year for use as a valid inventory SCC is maintained by KDHE. The date of the last update is included in the document title as well as the Excel worksheet title. This document is located under the Helpful Links portion of the KDHE Emissions webpage at http://www.kdheks.gov/emission/index.html - Please look under the Codes links.

EPA also has a website with a searchable database of current (and expired) SCCs. It may be accessed at epa.gov/scc.
