The Kansas Newborn Screening team is continually grateful for the hard work and dedication of our state’s healthcare partners in improving the lives of Kansas newborns and their families. Improving the program’s effectiveness requires consistent and strategic collaboration between the follow-up team, health chemistry laboratory team, Kansas families, and you, our healthcare partners.

Over the past year, we have seen great improvement in all program performance metrics. These improvements are largely due to your dedication to staff training, updating facility protocols and practices, and adhering to higher newborn screening standards. In partnership with the Kansas Hospital Association (KHA) and the Kansas Midwives Association (KMA), we want to recognize those facilities and midwives who most closely adhered to state goals over the course of 2019.

**How Annual Recognitions Work**

To make comparisons most equitable, birthing facilities and providers were distributed into size classes by the number of births reported at each facility in 2019. Non-birthing facilities were distributed into size class by the total number of specimens sent to our laboratory in 2019.

The size classes by number of births/specimens are as follows:

- Very Small = 0-150
- Small = 151-550
- Medium = 551-1050
- Large = more than 1050

Each size class was then assessed against qualifying criteria based on state screening goals.
To earn recognition means that your facility clearly demonstrated a consistent effort to meet or exceed state screening goals in 2019. State Newborn Screening goals are:

**Critical Congenital Heart Defects (CCHD)**
- Screening status reported for 100% of infants born

**Hearing Loss**
- 100% of babies born are screened within 1 month of age
- Diagnostic evaluation complete with 3 months of age
- Infants with hearing loss receive early intervention services within 6 months of age
- Facility referral rates remain with the expected range for their screening equipment

There are two types of screened equipment used: OAE and AABR. No more than 8% of babies screened with OAE equipment should be referred for diagnostic testing. No more than 4% of babies screened with AABR equipment should be referred for diagnostic testing. Higher than expected referral rates indicate that the screeners may not have consistently used correct screening procedures or technique.

**Metabolic and Genetic Conditions**
- 1.30% or less of all specimens submitted to the Kansas Health and Environment Laboratory (KHEL) are rejected as “Unsatisfactory”
- Average collection age for specimens is 24 hours of age
- Average elapsed time from collection to delivery at KHEL, “transit time,” is 24 hours
- 100% of specimens have complete and correct demographic information

Meeting these goals requires a dedication to higher screening standards and continual improvement. Birthing facilities and newborn providers must employ consistent training, efficient protocols, and effective internal communication to meet these goals. Facilities and providers named in these recognitions demonstrate their dedication to better newborn screening by either meeting the goals, showing improvement over time, or exceeding state average performance rates.
### Point-of-Care Recognition Categories & Qualifications

<table>
<thead>
<tr>
<th>Category</th>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>CCHD Screening</td>
<td>Screening status reported for 100% of babies born in 2019.</td>
</tr>
<tr>
<td>Hearing Screening</td>
<td>100% of babies screened, were screened within the first month of life AND referral rates remained at or below the recommended rate for the equipment used in all four quarters in 2019.</td>
</tr>
</tbody>
</table>

To make the Hearing Screening category as equitable as possible, we evaluated providers based on the number of babies who received screenings (as opposed to the number of babies born). This prevents exclusion bias caused by families who do not consent to screening. This number was then compared to the number of infants who were screened within one month. NICU and transfer status were also accounted for and did not negatively impact the resulting screening rates. Providers meeting this criteria were further evaluated for their referral rates. Those meeting both criteria received recognition.

### Metabolic & Genetic Recognition Categories & Qualifications

<table>
<thead>
<tr>
<th>Category</th>
<th>Criteria</th>
</tr>
</thead>
</table>
| Unsatisfactory Rate | - YTD average ≤ of 1.30%  
- Honorable mention: YTD average < State Average Rate                                               |
| Collection Age      | - YTD average < 30 Hours  
- Honorable mention: YTD average < State Average Rate                                               |
| Transit Time        | - YTD average ≤ 24 Hours  
- YTD average < 36 Hours  
- Honorable mention: YTD average < State Average Rate                                               |

Unsatisfactory rate was based on the count of unsatisfactory specimens divided by the total number of specimens received in 2019. Specimens that had multiple rejection codes were only counted once. Average collection age and transit times were calculated using initial specimens only.
Recognition Categories & Awards

“All Around Best of the Best”

Qualification Criteria:

Birthing facilities and newborn providers must earn recognition in 4 or more of the following categories to earn the “All Around Best of the Best” designation:

- Critical Congenital Heart Defects (CCHD) Screening
- Hearing Screening
- Winner or Honorable Mention in the Metabolic & Genetic Screening Categories
  - Unsatisfactory Rate
  - Collection Age
  - Transit Time

Awards:

- Recognitions plaque
- Recognitions banner
- Enhanced media kit including a press release template, an email/article template, sample social media content, and an exclusive digital awards badge

“Best of the Best in Point-of-Care/Metabolic and Genetic Screenings”

Qualification Criteria:

Birthing facilities and newborn providers must earn either:

- Recognition in all point-of-care screening categories
- Recognition in all metabolic and genetic screening categories (top honors or honorable mention)

Awards:

- Recognitions plaque
- Media kit including a press release template, an email/article template, and sample social media content

Facilities & Providers Recognized in One, Two, or Three Categories

Qualification Criteria:

Recognition in one, two, or three categories, but that did not earn recognition in any “Best of the Best” categories.

Awards: Custom printed recognition certificate
