Office of Vital Statistics
Donna Calabrese, Director

KANSAS TEENAGE PREGNANCY REPORT

The Kansas Department of Health and Environment (KDHE) annually publishes a teenage pregnancy report, summarizing data collected from vital records on stillbirths, abortions, and live births. The total of these three elements represents the number of pregnancies. KDHE has compiled nine tables containing pregnancy totals and pregnancy rates for the following age-groups 10-17, 15-17, 10-14, and 15-19 by county of residence.

List of Tables

Teenage Pregnancies for 10-17 Year Olds by County of Residence, Kansas, 2003

Teenage Pregnancies (10-17 years of age) by County of Residence, Kansas, 1999-2003

Teenage Pregnancy Rates (10-17 years of age) by County of Residence, Kansas, 1999-2003

Teenage Pregnancies for 15-17 Year Olds by County of Residence, Kansas, 2003

Teenage Pregnancies (15-17 years of age) by County of Residence, Kansas, 1999-2003

Teenage Pregnancy Rates (15-17 years of age) by County of Residence, 1999-2003

Teenage Pregnancies for 10-19 Year Olds by Component, by County of Residence, Kansas, 2003

Teenage Pregnancy Rates (10-14, 15-19 years of age) by County of Residence, Kansas, 1999-2003

Teenage Pregnancy Rates (10-19 years of age) by County of Residence, Kansas, 1999-2003

Technical Notes

Abortion (induced termination of pregnancy): The purposeful interruption of pregnancy with the intention other than to produce a live-born infant or to remove a dead fetus and which does not result in a live birth.

Stillbirth: Any complete expulsion or extraction from its mother of a product of human conception, the weight of which is in excess of 350 grams, irrespective of the duration of pregnancy, resulting in other than a live birth, and which is not an induced termination of pregnancy

Live Birth: The complete expulsion or extraction of a product of human conception from its mother, irrespective of the duration of pregnancy, that, after such expulsion or extraction, shows any evidence of life such as breathing, heartbeat, pulsation of the umbilical cord, or voluntary muscle movement, whether or not the umbilical cord has been cut or the placenta attached.

Residence Data: Residence data is information compiled according to the usual residence regardless of where the event occurred (including events occurring out-of-state).

Teenage Pregnancy: A live birth, stillbirth, or abortion occurring to a female under 20 years of age.

Teenage Pregnancy Rate:
$$\frac{\text{live births, stillbirths, abortions for females in a specific age-group}}{\text{female population in a specific age-group}} \times 1,000$$

Population:

U.S. Census Bureau population estimates and counts were obtained on the Internet at:

<http://www.census.gov/>

1999, 2002-2003 female age-group county population estimates were compiled by the U.S.

Census Bureau as of July 1 of each year.

2000 female age-group county population counts were compiled by the U.S. Census Bureau as of 4/1/2000.

2001 female age-group county population estimates were compiled by the Kansas Department of Health and Environment based on the 2000 Census counts.

Rate Reliability:

Vital statistics are easily influenced by random variation, and single-year rates can fluctuate from year to year. A multiple-year rate, such as a 5- or 10- year average of single-year rates, would be more accurate in formulating conclusions on vital events. For example, between 1999 and 2003, the teenage pregnancy rate for Kansas varied from 26.4 to 31.9 teenage pregnancies per 1,000 10-19 female population. The 1999-2003 5-year teenage pregnancy rate was 29.1. The 5-year rate smoothes some of the variation in single-year rates and would be a more reliable indicator of teenage pregnancy rates in Kansas.

Rates based on a small or large number of events in a sparsely populated area can vary widely. To exemplify the variation that may occur with a small change in the number of events, in 2003, Lane County had one of the lowest 10-19 female population in Kansas at 138 and Sedgwick County had the highest at 33,472. With one teenage pregnancy occurring in Lane County in 2003, the 10-19 teenage pregnancy rate was 7.2; whereas 1,054 teenage pregnancies occurring in Sedgwick County resulted in a teen pregnancy rate of 31.5 per 1,000 10-19 female population. If five more teenage pregnancies had occurred in each county, Lane County's teenage pregnancy rate would have increased to 43.5, while Sedgwick County's rate would have increased only slightly, to 31.6 teenage pregnancies per 1,000 10-19 female population. Therefore, one must use caution when comparing rates of vital events between counties of significantly different population sizes to avoid misleading conclusions.

Unknowns:

County of residence is collected for all vital events that occur in Kansas. However, some states that share vital event data with Kansas may not collect the county of residence. This is the case with several states that collect abortion data. Those pregnancy outcomes will be reported as unknown and are not factored into any county-based rates.
