DIFFERENCE IN HIV (NON-AIDS) CASES REPORTED IN PREVIOUS REPORTS
AND REPORTS PRODUCED AFTER JANUARY 1st 2008

There is an increase in the number of living HIV (non AIDS) cases in the reports published after January 1st, 2008 by Kansas HIV/AIDS Surveillance program, compared to reports published prior to January 1st, 2008. Following is a brief explanation for this difference.

Prior to July 1999 Kansas City Missouri Health Department (KCMO) carried on HIV (non-AIDS) surveillance for Kansas and maintained HIV Reporting System (HRS) for Kansas cases receiving services in Missouri. Starting from July 1999 HIV (non-AIDS) surveillance was started in Kansas and the HRS database, which was maintained by Missouri, was merged with the existing Kansas AIDS Reporting System (ARS) and the new database was named HIV/AIDS Surveillance System (HARS). Historically, July 1999 has been used as a start date retrieval criteria for HIV (non AIDS) cases from HARS for analysis purposes. However, it had been established that there were Kansas HIV (non- AIDS) cases reported prior to July 1999 that were not included in the analysis during previous years. Starting from January 1st, 2008, retrieval criteria has been modified so that all HIV (non-AIDS) cases which meet CDC's surveillance definition are included in the analysis.
