

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 7
11201 Renner Boulevard
Lenexa, Kansas 66219

APR 28 2020

Mr. Thomas C. Stiles, Director
Bureau of Water
Kansas Department of Health and Environment
Curtis State Office Building
1000 SW Jackson St., Suite 400
Topeka, Kansas 66612-1367

Dear Mr. Stiles:

The U.S. Environmental Protection Agency has completed its review of the 2020 Kansas Clean Water Act, Section 303(d) List of water quality-limited water-body segments still requiring Total Maximum Daily Loads. The list was submitted both electronically and in hard copy by the Kansas Department of Health and Environment and received electronically by the EPA on March 30, 2020. The KDHE's Section 303(d) List submittal included:

- 1) A letter identifying the submittal as Kansas 2020 Section 303(d) List;
- 2) Kansas' final 2020 CWA, Section 303(d) impaired waters list (including a list of priority waters for TMDL development);
- 3) The full Integrated Report for 2020;
- 4) The KDHE's 2020 assessment and listing methodology;
- 5) A summary of waters removed from Kansas' 2018 Section 303(d) List;
- 6) A public participation hearing notice and sign-in, and indication that no public comments were received.

The KDHE's submission is formatted consistent with the EPA's guidance regarding "integrated reporting" and therefore contains five separate categories of listing waters. There are 1235 water body segments and 2385 water body/pollutant combinations within Category 5 of the Kansas integrated report which constitutes Kansas' list of water quality-limited segments still requiring TMDLs subject to the EPA's approval.

Based on its review, the EPA has determined that the KDHE's list of water quality-limited segments and their impairments still requiring TMDLs meets the requirements of Section 303(d) of the CWA and the EPA's implementing regulations. The EPA is therefore approving the 2020 Kansas CWA, Section 303(d) List.

I congratulate you and your staff for the completion of the list development and submission process. This process requires a significant amount of staff resources and involves a complex evaluation and

assessment of water quality data. We look forward to working with the KDHE on the development of the 2022 Section 303(d) List. If you would like to further discuss the EPA's action, please contact me at (913) 551-7146, or Jason Daniels, of my staff, at (913) 551-7443.

Sincerely,

A large, stylized handwritten signature in black ink, appearing to read 'Jeffery Robichaud'.

Decision Document of the 2020 Kansas Clean Water Act, Section 303(d) List Water Quality Limited Segments Still Requiring TMDLs

I. Executive Summary

On March 30, 2020, the Kansas Department of Health and Environment electronically submitted the state's 2020 CWA Section 303(d) List to the United States Environmental Protection Agency for review. Following its review of Kansas' complete submittal, in accordance with 40 CFR § 130.7(d) (2), the EPA is approving Kansas 2020 CWA Section 303(d) List (Category 5 of their 2020 IR), consisting of a total of 1235 water bodies with 2385 water body segment/pollutant combinations. This document summarizes the EPA's review and the basis for its decision. Attachment 1 represents the EPA review of each waterbody for the addition to, or removal from, the state's CWA Section 303(d) List and the EPA approved 2020 Kansas 303(d) List is found in Attachment 2.

Section 303(d)(1) of the CWA directs states to identify those waters within their jurisdictions for which effluent limitations required by Section 301(b)(1)(A) and (B) are not stringent enough to implement any applicable water quality standard (referred to as 'water quality-limited segments' defined in 40 CFR § 130.7), and to establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters. The CWA Section 303(d) listing requirement applies to water quality-limited segments impaired by pollutant loadings from both point and/or nonpoint sources. After a state submits its CWA Section 303(d) List to the EPA, the Agency is required to approve or disapprove that list pursuant to Section 303(d)(2) and 40 CFR § 130.7(d)(2).

All waters which are included in Kansas' approved 2020 CWA Section 303(d) List will remain on the state's CWA Section 303(d) List, unless the KDHE removes a water body from a subsequent list and the EPA approves the removal.

The KDHE's submittal for the EPA's review includes a 2020 list reflecting, among other things:

- Additional water bodies which the KDHE determined to be water quality-limited segments pursuant to the state's EPA-approved water quality standards and the state's listing methodology and, therefore, included in the 2020 CWA Section 303(d) List submitted to the EPA for review; and
- Water bodies included on Kansas' previously approved 2018 CWA Section 303(d) List which were included in the EPA approved Total Maximum Daily Loads pursuant to the state's EPA-approved water quality standards and, therefore, removed from the 2020 CWA Section 303(d) List submitted to the EPA for review.

KDHE also identified in its submittal water bodies previously included on Kansas' approved/established 2018 CWA Section 303(d) List, and pursuant to 40 C.F.R. § 130.7(b)(6), determined not to need TMDLs pursuant to Kansas' EPA-approved water quality standards and, therefore, with good cause removed from the 2020 Section 303(d) List submitted to the EPA for review (Attachment 1).

Consistent with 40 CFR § 130.7(b)(6), KDHE included in its submittal its assessment methodology used to identify waters that do not meet the state's EPA-approved water quality standards and, therefore, are required to be included on CWA Section 303(d) List. The methodology establishes specific protocols and thresholds for assessing water bodies, in addition to data sufficiency and data quality requirements. The methodology contains procedures for assessing both aquatic life use support and human health use support.

While the guidelines, protocols, and requirements in state's statutes and the state's methodology might be useful tools for the KDHE to use in identifying impaired waters, they are not part of the state's water quality standards. Hence, the EPA did not rely solely on the state's statutes or the methodology in reviewing Kansas' list. Instead, the EPA reviewed all existing and readily available information including any information excluded under the state's methodology, to determine if the state's list was developed consistent with the underlying EPA-approved state water quality standards. The EPA's review process generally followed a two-step analysis:

- (1) The EPA reviewed the state's listing methodology, including data collection and data assessment requirements, to determine whether, based on Kansas' EPA-approved water quality standards, the methodology was a reasonable method for identifying water quality -limited segments; and
- (2) EPA requested additional information from the KDHE when it determined that such additional information was necessary to conduct further water body and data analysis independent of the state's listing methodology.

This action by the EPA and the approved waters listed in Attachment 2 represent a complete decision on the 2020 Kansas submittal, and the 2020 Kansas 303(d) List for CWA purposes.

The EPA's approval of Kansas' Section 303(d) list extends to all water bodies on the list with the exception of those waters that may be located within Indian Country, as defined in 18 U.S.C. Section 1151. The EPA is taking no action to approve or disapprove the State's list with respect to those waters at this time. The EPA, or eligible Indian Tribes, as appropriate, will retain responsibilities under Section 303(d) for those waters. In addition, the EPA approval actions of State CWA Section 303(d) lists do not constitute a finding of State and/or Tribal jurisdiction over particular waters. The EPA provided the opportunity for all nine tribes in Region 7 to consult on the 2020 303(d) lists.

The statutory and regulatory requirements relevant to CWA Section 303(d) Lists, and the EPA's review of Kansas' compliance with each requirement, are described in detail below.

II. Statutory and Regulatory Background

A. Identification of Water Quality-limited Segments for Inclusion on the CWA Section 303(d) List

Section 303(d)(1) of the CWA directs states to identify those waters within its jurisdiction for which effluent limitations required by Section 301(b)(1)(A) and (B) are not stringent enough to implement any applicable water quality standard, and to establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters.

The Section 303(d) listing requirement applies to waters impaired by point and/or nonpoint sources, pursuant to the EPA's long-standing interpretation of Section 303(d).

The EPA regulations at 40 CFR § 130.7(b)(1) provide that states need to list waters where the following controls are not adequate to implement applicable standards:

- Technology-based effluent limitations required by the CWA;
- More stringent effluent limitations required by state or local authority; and
- Other pollution control requirements required by state, local, or federal authority.

B. Consideration of Existing and Readily Available Water Quality-Related Data and Information

In developing Section 303(d) Lists, states are required to assemble and evaluate all existing and readily available water quality related data and information, including, at a minimum, consideration of existing and readily available data and information about the following categories of waters (see 40 CFR § 130.7(b)(5)):

- Waters identified as partially meeting or not meeting designated uses, or as threatened, in the state's most recent Section 305(b) report;
- Waters for which dilution calculations or predictive modeling indicate non-attainment of applicable standards;
- Waters for which water quality problems have been reported by governmental agencies, members of the public, or academic institutions; and
- Waters identified as impaired or threatened in any Section 319 nonpoint assessment submitted to the EPA.

States are also required to consider any other data and information that is existing and readily available. The EPA's 2002 *Recommended Framework for EPA Approval Decisions on 2002 State Section 303(d) List Submissions* describes categories of water quality related data and information that may be existing and readily available.

In addition to requiring states to assemble and evaluate all existing and readily available water quality-related data and information, the EPA regulations at 40 CFR § 130.7(b)(6) require states to include as part of their submissions to the EPA, documentation to support decisions to rely or not to rely on particular data and information and decisions to list or not to list waters. Such documentation needs to include, at a minimum, the following information:

- A description of the methodology used to develop the list;
- A description of the data and information used to identify waters;
- A rationale for any decision to not use any existing and readily available data and information; and
- Any other reasonable information requested by the EPA.

The state published a notice in the Kansas Register on November 7, 2019, requesting data covering the time period of January 1, 2000 through September 30, 2019. The request was for information on water quality problems in the state and made particular request for data in the Smoky Hill-Saline, Lower Arkansas and Kansas-Lower Republican River Basins. These three

basins are part of the states rotating basin plan for assessment and implementation priority.

C. Priority Ranking

The EPA regulations also codify and interpret the requirement in Section 303(d)(1)(A) of the CWA, that states establish a priority ranking for listed waters. The regulations at 40 CFR § 130.7(b)(4) require states to prioritize waters on their Section 303(d) Lists for TMDL development, and to identify those water quality-limited segments targeted for TMDL development in the next two years. In prioritizing and targeting waters, states must, at a minimum, take into account the severity of the pollution and the uses to be made of such waters (see, CWA Section 303(d)(1)(A)). As long as these factors are taken into account, the Act provides that states establish priorities. States may consider other factors relevant to prioritizing waters for TMDL development, including immediate programmatic needs, vulnerability of particular waters as aquatic habitats, recreational, economic, and aesthetic importance of particular waters, degree of public interest and support, and state or national policies and priorities (see 57 FR 33040, 33045 [July 24, 1992], and EPA's 1991 Guidance).

The state of Kansas identified its priority waters within its TMDL Vision Strategy. This strategy prioritizes waters for TMDL development from 2014 through 2022. For 2020-2021, Little Arkansas and Middle Arkansas rivers HUC8s of 11030012 and 11030013 will be targeted for TMDLs to address phosphorus impairments. In addition, drinking water supply streams impaired by nitrate in these HUCs will also be designated for TMDL development.

III. Kansas' Approach to Identifying Waters for the 2020 Section 303(d) List

A. Kansas' 2020 Integrated Report Format

The EPA guidance for states in meeting the requirements of CWA Section 303(d) recommends a format which integrates the requirements of both CWA Sections 303(d) and 305(b) in creating a five category "integrated report" format. The 2020 Kansas submission under CWA Section 303(d) is the seventh submission by the state of Kansas using this "integrated report" format. Category 5 of the 2020 integrated report (IR) constitutes Kansas' list of impaired waters for purposes of CWA Section 303(d) and is subject to the EPA's review and approval. The EPA is taking action only on Category 5 which includes water quality-limited segments still requiring TMDLs. The following describes the five categories constituting Kansas' IR and the number of water bodies assigned to each category by the KDHE. Under Kansas' five category system, some water bodies are assigned to more than one category for different pollutants.

Category 1 consists of 370 lakes and water body segments attaining all designated uses and no use is threatened. Kansas also requires that a water body never have been 303(d) listed to be placed in this category.

Category 2 consists of 126 lakes and water body segments for which some, but not all, designated uses are attained and none are threatened. Attainment status of the remaining designated uses is unknown because data are insufficient to categorize a water body consistent with the state's listing methodology.

Category 3 consists of 109 lakes and water body segments for which there are

insufficient or no data and information to determine, consistent with the state's listing methodology, if any designated use is attained.

Category 4 consists of 425 lakes and water body segments for which one or more designated uses are impaired or threatened but establishment of a TMDL is not required.

Category 5 consists of 1235 waters for which one or more pollutants has caused, is suspected of causing, or is projected to cause an impairment or threat of impairment of one or more designated uses and the establishment of a TMDL is required. This category also includes those segments for which impairment is indicated, but the cause or source is unknown. Only water body segments within Category 5 are subject to the EPA's approval.

The state's IR format also incorporated an expansion of Category 4 into three sub-categories. Sub-Category 4a includes waters that are threatened or impaired, but for which a TMDL has been completed and approved. Sub-Category 4b includes waters that are threatened or impaired, but for which "other required control measures are expected to result in the attainment of water quality standards." Sub- Category 4c includes waters where the "threat or impairment is not caused by a pollutant." Sub- categories 4a through 4c are recognized within the EPA guidance for the development of an integrated report. The EPA's review of the state categories and sub-categories was conducted within the context of whether or not a water body segment should be listed within Category 5 based on existing and readily available data and information.

B. Kansas 2020 Methodology

Kansas' Methodology For Evaluation and Development of the 2020 Section 303(d) List of Impaired Water Bodies For Kansas, (March 9, 2020), guides the KDHE's evaluation of "existing and readily available water quality-related data and information" (40 CFR § 130.7(b)(5)) and identification of "water quality-limited segments still requiring TMDLs" (40 CFR § 130.7(a)). As described earlier, Category 5 of the 2020 List contains Kansas' list of impaired waters for purposes of CWA Section 303(d) which is subject to the EPA's review and approval. The EPA is taking action only on Category 5 which consists of water quality-limited segments still requiring TMDLs.

According to the state's "Listing Methodology," data sources used to assess water quality conditions in Kansas for purposes of Section 305(b) reporting and to aid in developing the state's 2020 Section 303(d) list include:

- 1) 2018 303(d) List;
- 2) 2020 305(b) Report's waters that are not meeting a designated beneficial use;
- 3) Clean Water Act 319 nonpoint source and Watershed Restoration and Protection Strategy assessments;
- 4) Drinking water source water assessment under Section 1453 of the Safe Drinking Water Act;
- 5) The KDHE's fish consumption advisories; and

- 6) Data, information, and water quality problems reported from local, State, or Federal agencies (especially USGS water quality studies), Tribal governments, the public, and academic institutions.

IV. EPA Analysis of Kansas' Approach to Listing Waters for the 2020 List

The EPA is approving Kansas' 2020 CWA Section 303(d) List, based on the requirements of Section 303(d) of the CWA and 40 CFR § 130.7. The EPA's action is based on its analysis of whether the KDHE reasonably identified all water quality-limited segments requiring listing. In determining whether the KDHE reasonably identified all water quality-limited segments still needing a TMDL, the EPA first looked at the KDHE's use support determinations as documented in the state's submitted database.

Kansas' 2020 assessment methodology identifies a general "cutoff date" as September 30, 2019, for data collection in support of the KDHE's water quality data assessment. The EPA guidance recognizes the appropriateness of a reasonable data collection cutoff date allowing states to initiate actual data assessment and list preparation. Data not considered for the 2020 assessment should be considered for the 2022 submission. Despite the application of a "cutoff date" by Kansas for the development of the 2020 list, the KDHE considered data submitted as part of the state's public notice and comment period from November 7, 2019 through December 13, 2019. The EPA believes the KDHE complied with the requirements of federal regulations at 40 CFR § 130.7(b)(5) regarding the assembly and evaluation of all existing and readily available water quality-related data and information.

The 2020 assessment methodology also discusses the KDHE's treatment of water quality-related data collected more than 10 years prior to the current assessment period for permanent monitoring stations. Federal regulations and guidance recognize that, in some instances, certain data might not reflect current water quality conditions, and 40 CFR § 130.7(b)(6)(iv) provides for the state to demonstrate "good cause" when not including a water or waters on its list. A demonstration of "good cause" relies on the state showing that there are changes in condition in the watershed or water body result in older data not being representative of current water quality status. Data age alone is not considered an acceptable reason for not using that data in a state's assessment of a water body to determine if it is meeting water quality standards.

To confirm that the KDHE's CWA Section 303(d) List was developed in a manner compliant with the requirements at 40 CFR § 130.7 (regarding the assembly and evaluation of "all existing and readily available water quality-related data and information"), the EPA reviewed the information contained in the KDHE's March 30, 2020, submittal for waters listed in Kansas' Integrated Report Category 5, and all waters proposed for delisting. These submittals included an assessment/tracking database and supplemental data files containing water quality data used in Kansas' assessment.

V. Approved Listings

A. Water Quality-Limited Segments for Inclusion on the Section 303(d) List

The EPA has reviewed Kansas' 2020 list submission and concludes that the state developed its list of impaired waters (i.e., Category 5 of its IR) in compliance with Section 303(d) of the CWA and 40 C.F.R. § 130.7, and as a result, approves the listing of the water bodies and corresponding pollutants identified in Table 2. The EPA's review is based on its analysis of whether the state reasonably considered existing and readily available water quality-related data and information, and reasonably identified waters to be listed. The EPA is approving the state's submitted CWA Section 303(d) List.

VI. EPA Analysis of KDHE's Changes to the State's CWA Section 303(d) List

The EPA compared waters listed in Category 5 of the state's 2018 IR with waters listed in Category 5 of the state's 2020 IR to determine whether waters were removed from the list, pollutants identified as causing impairment were changed, or water body descriptions had changed. In each case, such changes could constitute a change to the state's CWA Section 303(d) List requiring the EPA's review.

In its review of the state's entire 2020 list, the EPA has reviewed Kansas' description of the data and information the state relied upon in developing its list, its methodology for identifying water bodies. Additionally, the EPA would have reviewed the KDHE's responses to public comments, however no public comments were submitted on the 2020 list. In accordance with 40 CFR § 130.7(d)(2), the EPA is approving Kansas' 2020 CWA Section 303(d) List (Category 5 of their 2020 IR), consisting of a total of 1235 water bodies with 2385 water body/pollutant combinations.

Waters proposed by the KDHE for exclusion from Category 5 of Kansas' 2020 CWA Section 303(d) List or for changes in their listing status which could be considered as a change to the CWA Section 303(d) List (e.g., typographical errors, water quality improvement, listed causal pollutant changed) are identified below.

As a result of the KDHE's changes to the list of water bodies which were modified or removed from Kansas' CWA Section 303(d) List, the EPA reviewed the 257 water bodies to determine whether the KDHE had "good cause" for modifying or not including these waters on its 2020 CWA Section 303(d) List.

A. Waters Removed by the KDHE from Kansas CWA Section 303(d) List for Good Cause

The EPA is approving the Kansas CWA Section 303(d) List which reflects the modification to or removal of 48 stations with 257 water body/pollutant combinations water bodies consistent with the requirements of federal regulations at 40 CFR 130.7(b)(6)(iv). Section 40 CFR 130.7(b)(6)(iv) requires that the state provide documentation to the EPA to support its decision to list or not to list its waters. These regulations require that the state demonstrate "good cause" for not including a water or waters on the list. The reasons for each delisting were included in the submittal, and additional details were provided to the EPA in the form of a database in the final Section 303(d) List submittal. The following are the general reasons cited for removal of water bodies from the Section 303(d) List:

- Approval of a TMDL that addressed the listed waterbody/pollutant combination.
- Recent data collected from a 303(d) listed segment indicated that a listed pollutant is no longer a potential cause of water quality impairment.
- Changes in water quality standards and/or assessment methods resulted in changes in the use support status of listed segments.
- The state review identified flaws in original listings, attributable to errors associated with segment identifiers, or the use of inapplicable criteria.

The rationale supporting the removal of these 257 water body/pollutant combinations from the state's list can be grouped into two general categories and are also identified by each segment name and assessment unit identifier in Attachment 1.

1. Waters with Approved TMDLs

Twenty-six monitoring stations representing 143 water body/pollutant were removed from the state's list because TMDLs have been developed for those waters and approved by the EPA. In each instance, a TMDL has been developed for the listed pollutant or condition or the KDHE and the EPA have agreed that the TMDL will address the listed pollutant or condition. For some waters, they continue to be listed in Kansas' Category 5 for another pollutant or condition, or they are listed in another Category within Kansas' IR based on other water quality data. These waters are included in Attachment 1.

Kansas - Lower Republican River Basin

Chemistry Stations 503, 504, 509, 510, 649, 650, 707, 709, 710 and 711- TMDLs for total phosphorus were approved by the EPA on March 5, 2020. The monitoring stations and sixty associated stream segments are now listed in Category 4a for total phosphorus on the 2020 Kansas IR. In today's action, the EPA has reviewed the "good cause" for the delisting of the stations and associated stream segments because these water bodies no longer require the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Lower Arkansas River Basin

Chemistry Stations 523, 524, 536,758 - TMDLs for total phosphorus were approved by the EPA on December 27, 2018. The monitoring stations and 8 associated stream segments are now listed in Category 4a for total phosphorus on the 2020 Kansas IR. In today's action, the EPA has reviewed the "good cause" for the delisting of the stations and associated stream segments because these water bodies no longer require the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Chemistry Stations 218, 527 - TMDLs for pH were approved by the EPA on

February 8, 2019. The monitoring stations and 15 associated stream segments are now listed in Category 4a for pH on the 2020 Kansas IR. In today's action, the EPA has reviewed the “good cause” for the delisting of the associated stream segments because these water bodies no longer require the development of a TMDL for pH, consistent with 40 CFR § 130.7(b).

Chemistry Stations 218, 527, 728, 729 - TMDLs for total phosphorus were approved by the EPA on February 8, 2019. The monitoring stations and 26 associated stream segments are now listed in Category 4a for total phosphorus on the 2020 Kansas IR. In today's action, the EPA has reviewed the “good cause” for the delisting of the associated stream segments because these water bodies no longer require the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Chemistry Station 281 - A TMDL for nitrate was approved by the EPA on June 28, 2019. The monitoring station and associated stream segment is now listed in Category 4a for nitrate on the 2020 Kansas IR. In today's action, the EPA has reviewed the “good cause” for the delisting of the station and the associated stream segment because this water body no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Smoky Hill/Saline River Basin

Chemistry Station 643 - A TMDL for total phosphorus was approved by the EPA on April 10, 2019. The monitoring station and associated stream segment is now listed in Category 4a for total phosphorus on the 2020 Kansas IR. In today's action, the EPA has reviewed the “good cause” for the delisting of the station and the associated stream segment because this water body no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Chemistry Stations 267, 640 - TMDLs for total phosphorus were approved by the EPA on April 29, 2019. The monitoring stations and 17 associated stream segments are now listed in Category 4a for total phosphorus on the 2020 Kansas IR. In today's action, the EPA has reviewed the “good cause” for the delisting of the associated stream segments because these water bodies no longer require the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Chemistry Station 749 - A TMDL for total phosphorus was approved by the EPA on April 5, 2019. The monitoring station and associated stream segment is now listed in Category 4a for total phosphorus on the 2020 Kansas IR. In today's action, the EPA has reviewed the “good cause” for the delisting of the station and the associated stream segment because this water body no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Chemistry Stations 268 - TMDLs for nitrate were approved by the EPA on July 12, 2019. The monitoring station and two associated stream segments are now listed in

Category 4a for nitrate on the 2020 Kansas IR. In today's action, the EPA has reviewed the “good cause” for the delisting of the associated stream segments because these water bodies no longer require the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Chemistry Stations 264, 265, 268 - TMDLs for total phosphorus were approved by the EPA on July 8, 2019. The monitoring stations and 12 associated stream segments are now listed in Category 4a for total phosphorus on the 2020 Kansas IR. In today's action, the EPA has reviewed the “good cause” for the delisting of the associated stream segments because these water bodies no longer require the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

2. Error in Previous Assessment

Three stations representing 33 water body/pollutant combinations are being removed from the state 303(d) list to Category 2 based on new water quality data which indicate the use is supported with regard to the previously specified pollutants. Each water body is listed in Attachment 1.

Kansas - Lower Republican River Basin

Kansas River at Kansas City, Kansas – Review of this water body information for the 2020 section 303(d) list uncovered an error in the previous assessment. The stream chemistry 203 monitoring station and eighteen associated stream segments are now listed in Category 2 for atrazine in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting these water bodies no longer require the development of a TMDL for atrazine consistent with 40 CFR § 130.7(b).

Solider Creek Near Topeka – Review of this water body information for the 2020 section 303(d) list uncovered an error in the previous assessment. The stream chemistry 239 monitoring station and five associated stream segments are now listed in Category 2 for Atrazine in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting these water bodies no longer require the development of a TMDL for Atrazine consistent with 40 CFR § 130.7(b).

Lower Arkansas River Basin

Arkansas River Near Arkansas City – Review of this water body information for the 2020 section 303(d) list uncovered an error in the previous assessment. The stream chemistry 218 monitoring station and ten associated stream segments are now listed in Category 2 for Atrazine in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting these water bodies no longer require the development of a TMDL for Atrazine consistent with 40 CFR § 130.7(b).

3. New Data Supports Change in Listing

Nineteen stations representing 81 stream water body/pollutant combinations are being

removed from the state 303(d) list to Category 2 based on new water quality data which indicate the use is supported with regard to the previously specified pollutants. Each waterbody is listed in Attachment 1.

Kansas-Lower Republican River Basin

Black Vermillion River Near Frankfort (SC505) - New water quality data indicate this monitoring station and 17 associated water bodies are meeting water quality standards for total suspended solids. The monitoring station and water bodies are now listed in Category 2 for total suspended solids in the Kansas 2020 IR. In today's action, the EPA has reviewed the "good cause" for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Little Blue River Near Hollenburg (SC232) - New water quality data indicate this monitoring station is meeting water quality standards for copper. The monitoring station and five associated stream segments are now listed in Category 2 for copper in the Kansas 2020 IR. In today's action, the EPA has reviewed the "good cause" for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Lower Arkansas River Basin

Black Kettle Creek Near Halstead (SC705) - New water quality data indicate this monitoring station is meeting water quality standards for atrazine. The monitoring station and one associated stream segment are now listed in Category 2 for atrazine in the Kansas 2020 IR. In today's action, the EPA has reviewed the "good cause" for the delisting because this water body no longer requires the development of a TMDL, consistent with 40 CFR § 130.7(b).

Cow Creek Near Willowbrook (SC522) - New water quality data indicate this monitoring station is meeting water quality standards for arsenic. The monitoring station and two associated water bodies are now listed in Category 2 for arsenic in the Kansas 2020 IR. In today's action, the EPA has reviewed the "good cause" for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Cowskin Creek at Wichita (SC730) - New water quality data indicate this monitoring station is meeting water quality standards for atrazine. The monitoring station and four associated stream segments are now listed in Category 2 for atrazine in the Kansas 2020 IR. In today's action, the EPA has reviewed the "good cause" for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Sandy Creek Near Ruella (SC619) - New water quality data indicate this monitoring station is meeting water quality standards for temperature. The monitoring station and three associated stream segments are now listed in Category 2 for temperature in the

Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Slate Creek Near Wellington (SC528) - New water quality data indicate this monitoring station is meeting water quality standards for atrazine. The monitoring station and five associated water bodies are now listed in Category 2 for atrazine in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Marais Des Cygnes River

Appanoose Creek Near Richter (SC692) - New water quality data indicate this monitoring station is meeting water quality standards for dissolved oxygen. The monitoring station and two associated stream segments are now listed in Category 2 for dissolved oxygen in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Appanoose Creek Near Richter (SC692) - New water quality data indicate this monitoring station is meeting water quality standards for lead. The monitoring station and two associated stream segments are now listed in Category 2 for lead in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Drywood Creek Near Garland (SC617) - New water quality data indicate this monitoring station is meeting water quality standards for sulfate. The monitoring station and four associated stream segments are now listed in Category 2 for sulfate in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Neosho River Basin

Deer Creek Near Iola (SC609) - New water quality data indicate this monitoring station is meeting water quality standards for dissolved oxygen. The monitoring station and two associated stream segments are now listed in Category 2 for dissolved oxygen in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Mudd Creek Near Marion (SC691) - New water quality data indicate this monitoring station is meeting water quality standards for sulfate. The monitoring station and one associated stream segment is now listed in Category 2 for sulfate in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because this

water body no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Owl Creek Near Humboldt (SC610) - New water quality data indicate this monitoring station is meeting water quality standards for dissolved oxygen. The monitoring station and six associated stream segments are now listed in Category 2 for dissolved oxygen in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Smoky Hill-Saline River Basin

Gypsum Creek Near Solomon (SC641) - New water quality data indicate this monitoring station is meeting water quality standards for atrazine. The monitoring station and eleven associated water bodies are now listed in Category 2 for atrazine in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Lake Scott State Park (LM011201) - New water quality data indicate this monitoring station is meeting water quality standards for arsenic. The monitoring station and one associated lake is now listed in Category 2 for arsenic in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because this water body no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Smoky Hill River Near Salina (SC268) - New water quality data indicate this monitoring station is meeting water quality standards for nitrate. The monitoring station and two associated stream segments are now listed in Category 2 for nitrate in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Solomon River Basin

Bow Creek Near Stockton (SC545) - New water quality data indicate this monitoring station is meeting water quality standards for sulfate. The monitoring station and one associated stream segments are now listed in Category 2 for sulfate in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because this water body no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Deer Creek Near Kirwin (SC721) - New water quality data indicate this monitoring station is meeting water quality standards for dissolved oxygen. The monitoring station and eleven associated stream segments are now listed in Category 2 for dissolved oxygen in the Kansas 2020 IR. In today's action, the EPA has reviewed the “good cause” for the delisting because these water bodies no longer require the development of a TMDL,

consistent with 40 CFR § 130.7(b).

Sheridan Co. SFL (LM069401) - New water quality data indicate this monitoring station is meeting water quality standards for arsenic. The monitoring station and one associated water body are now listed in Category 2 for arsenic in the Kansas 2020 IR. In today's action, the EPA has reviewed the "good cause" for the delisting because these water bodies no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

Walnut River Basin

Eight Mile Creek Near Douglas (SC704) - New water quality data indicate this monitoring station is meeting water quality standards for atrazine. The monitoring station and one associated stream segment are now listed in Category 2 for atrazine in the Kansas 2020 IR. In today's action, the EPA has reviewed the "good cause" for the delisting because this water body no longer require the development of a TMDL, consistent with 40 CFR § 130.7(b).

The EPA concludes that the state properly assembled and considered all existing and readily available data and information for the water bodies identified above proposed for delisting, including all of the existing and readily available data and information relating to the categories of waters specified in 40 CFR 130.7(b)(5). Therefore, EPA concludes that the state's decisions regarding the above waters identified in its listing submittal are consistent with federal listing requirements.

V. Priority Ranking in KDHE's CWA Section 303(d) List

The KDHE's listing methodology describes how the state will prioritize water bodies for purposes of establishing TMDLs. Kansas' submission of its 2020 CWA Section 303(d) List included a priority ranking of each water body as required in Section 303(d)(1)(A) of the CWA and 40 CFR 130.7(b)(4) of the EPA's implementing regulations. The EPA does not review these priorities for approval, only that they are part of the submittal. The state of Kansas identified its priority waters within its TMDL Vision Strategy. This strategy prioritizes waters for TMDL development from 2014 through 2022.

VI. Kansas' Public Participation Process

The KDHE public noticed its 2020 draft CWA Section 303(d) List from February 27 through March 27, 2020. The KDHE also convened one public hearings during that period on March 10, 2020. The KDHE received no comments in the public notice period that led to changes in the list. The final list as submitted to the EPA did include the EPA approval of TMDLs in the Kansas-Lower Republican River Basin on March 5, 2020. The final version of the Kansas Section 303(d) List was submitted to the EPA on March 30, 2020.

The EPA has reviewed Kansas' public participation process and has concluded that the state provided adequate public notice and opportunity for the public to comment on its decision regarding the CWA Section 303(d) List in compliance with federal requirements.

Attachments to the 2020 Kansas Section 303(d) List

Attachment 1 represents the EPA review of each waterbody for the addition to, or removal from, the state's CWA Section 303(d) List and the explanation supporting the rationale or good cause by Assessment Unit ID/Pollutant. Attachment 2 represents the EPA approved 2020 Kansas CWA Section 303(d) List by station. The following terms are used in the tables and defined below.

Br	Branch
Cat	Category
Co.	County
Cr	Creek
CUSEGA	Catalog Unit Segment Number Alpha
<i>E. Coli</i>	<i>Escherichia coli</i>
Fk	Fork
HUC	Hydrologic Unit Code
Hwy	Highway
LM	Lake Monitoring station
NPDES	National Pollutant Discharge Elimination System
NWR	National Wildlife Refuge
PCB	Polychlorinated biphenyls
R	River
SB	Stream Biology monitoring station
SC	Stream chemistry monitoring station
SFL	State Fishing Lake
USGS	United States Geological Survey
W.A.	Wildlife Area
