

Tires are ideal breeding sites for mosquitoes. When filled with rain and leaves, they provide an “incubator” for mosquito larvae.

Preventing mosquito bites can protect you and your family from mosquito-borne diseases including ***West Nile Virus*** and ***Zika Virus***.

PREVENT MOSQUITOES FROM BREEDING IN YOUR OLD TIRES

Leave your tires with the tire retailer to be properly disposed

If you take your tires home or already have tires, ***prevent*** mosquitoes from breeding by:

- Storing tires inside or covering tires stored outside
- Emptying tires holding water
- Drilling holes in tires to allow water to drain
- Filling tires with dirt, sand, or gravel

Never allow water to accumulate in tires
